

# Automation Workflow

## AI Business Operations Platform (ABOP)

### Overview

The Automation Workflow layer connects Airtable data, AI agents, and business processes to reduce manual work and improve operational efficiency.

The workflow system is designed around automated triggers, AI analysis, task creation, and reporting.

---

### Automation Architecture

## Workflow 1: Lead Capture & AI Qualification

### Purpose

Automatically analyze incoming leads and prioritize sales opportunities.

---

### Trigger

New lead created in:

Leads Table

## Workflow Steps

```
graph TD; A[New Lead Submitted] --> B[Lead Record Created]; B --> C[AI Lead Qualification Agent]; C --> D[Lead Score Generated]; D --> E[Priority Assigned]; E --> F[Sales Follow-Up Task Created];
```

## Input Data

The automation processes:

- Lead name
- Company
- Contact information
- Lead source
- Service request
- Urgency level

## AI Output

Generated:

- Qualification status
- Lead priority
- Recommended action
- AI summary

Example:

Priority:

High

Recommendation:

Schedule discovery call within 24 hours.

Reason:

High urgency and strong service fit.

---

## Workflow 2: Opportunity Pipeline Management

### Purpose

Automatically track sales opportunities and revenue forecasting.

---

### Trigger

Opportunity stage update.

Example:

Qualified

↓

Proposal Sent

---

### Workflow Steps

Opportunity Updated

|

↓

AI Sales Analysis

|

↓

Probability Review

|

↓

Follow-Up Recommendation

|

↓

Task Created

---

## Automated Actions

Creates:

- Follow-up tasks
- Sales reminders
- Pipeline updates
- Revenue forecasts

---

## Workflow 3: Client Onboarding Automation

### Purpose

Create a consistent onboarding experience after a deal closes.

### Trigger

Opportunity status:

Closed Won

---

### Workflow Steps

```
graph TD; A[Deal Closed] --> B[Client Record Created]; B --> C[Onboarding Workflow Started]; C --> D[Tasks Generated]; D --> E[Client Success Tracking];
```

---

### Auto-Created Tasks

Example:

- ✓ Send welcome package
- ✓ Collect client documents
- ✓ Schedule kickoff meeting
- ✓ Assign account manager
- ✓ Create service checklist

---

## Workflow 4: Operations Task Automation

### Purpose

Manage daily operational activities.

---

### Trigger Events

- New client
  - New project
  - Service request
  - Internal process update
- 

### Workflow

```
graph TD;
    A[Business Event] --> B[Task Created];
    B --> C[Team Assignment];
    C --> D[Priority Set];
    D --> E[Status Tracking];
```

---

## Workflow 5: KPI Reporting Automation

### Purpose

Generate executive-level business insights.

---

## Trigger

Scheduled workflow:

Every Monday  
8:00 AM

---

## Workflow Steps

Collect Business Data  
↓  
Analyze KPIs  
↓  
AI KPI Analyst  
↓  
Generate Summary  
↓  
Update Dashboard

---

## Workflow 6: Automation Monitoring

### Purpose

Track system reliability.

---

### Monitored Data

- Automation executions
  - Successful runs
  - Failed runs
  - Processing time
-

## Success Calculation

Automation Success Rate =

Successful Runs

-----

Total Runs

× 100

---

## Integration Opportunities

Future integrations:

### CRM

- GoHighLevel
- HubSpot
- Salesforce

### Automation

- Zapier
- Make
- APIs

### Communication

- Gmail
- Slack
- WhatsApp

### AI

- OpenAI API
- AI assistants
- Custom agents

---

## Business Impact

The automation workflow system provides:

- ✓ Faster lead response
- ✓ Reduced repetitive work

- ✓ Consistent client onboarding
  - ✓ Better operational visibility
  - ✓ AI-assisted decision-making
- 

## Summary

The Automation Workflow layer transforms Airtable into an intelligent business operating system by connecting data, automation, and AI-driven actions.
