

AI Agent Framework

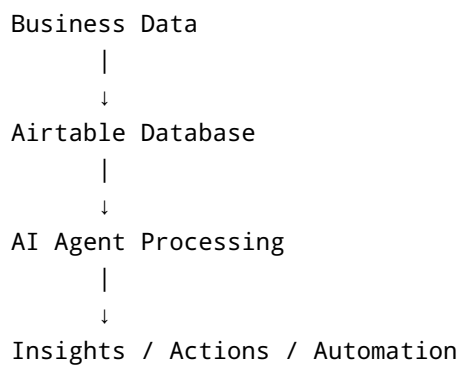

AI Business Operations Platform (ABOP)

Overview

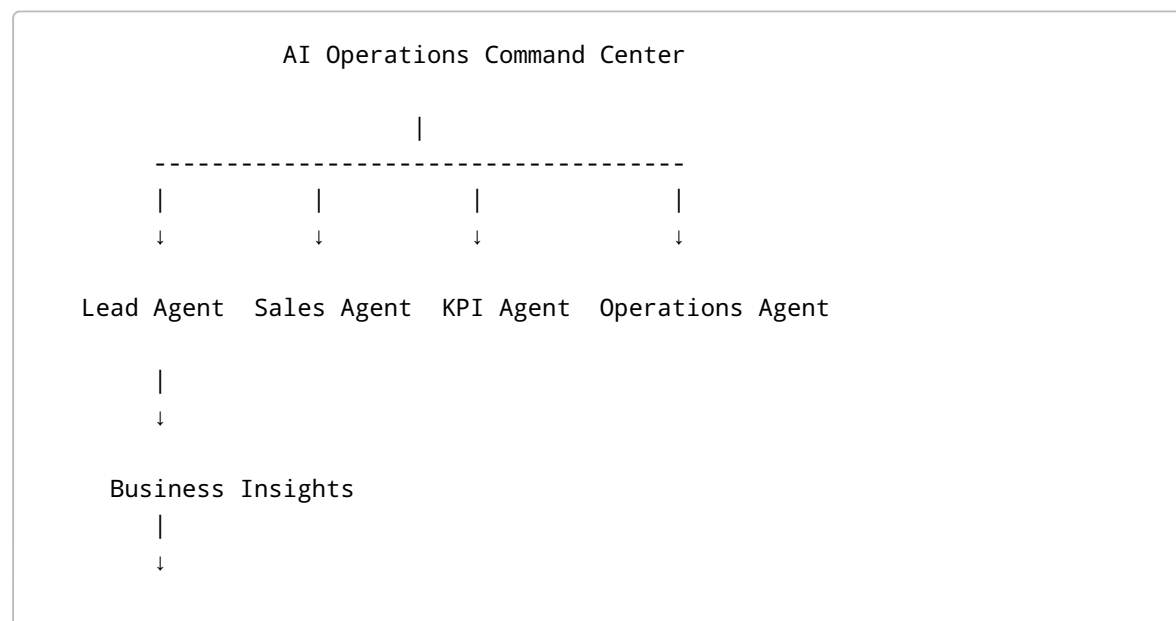

The AI Agent Framework provides intelligent automation capabilities inside the AI Business Operations Platform.

Each AI agent is designed to perform a specific business function by analyzing Airtable data, generating recommendations, and supporting operational decision-making.

The framework follows this model:

AI Agent Architecture

1. Lead Qualification Agent

Purpose

Automatically analyzes incoming leads and determines sales priority.

Business Problem Solved

Sales teams often spend too much time manually reviewing leads.

This agent helps prioritize the highest-value opportunities.

Trigger

New record created in:

Leads Table

Input Data

The agent analyzes:

- Lead name
 - Company
 - Lead source
 - Service requested
 - Urgency
 - Company information
 - Previous interactions
-

AI Processing

The agent evaluates:

- Buying intent
- Service urgency
- Customer fit
- Revenue potential

Output

Creates:

- Qualification score
- Lead category
- Recommended action
- AI summary

Example:

Lead Status:

Hot Lead

Recommendation:

Contact within 24 hours.

Reason:

High urgency and strong service fit.

2. Sales Follow-Up Agent

Purpose

Supports sales representatives by recommending next actions.

Trigger

Opportunity stage changes:

Example:

Qualified

↓

Proposal Sent

Input Data

Uses:

- Opportunity value

- Sales stage
 - Customer history
 - Previous communication
 - Probability percentage
-

AI Processing

Analyzes:

- Deal health
 - Closing probability
 - Follow-up timing
 - Potential blockers
-

Output

Generates:

- Follow-up reminders
- Sales recommendations
- Customer messaging suggestions

Example:

Recommendation:

Follow up with prospect within 3 days.

Reason:

Proposal sent but no decision recorded.

3. Operations Coordinator Agent

Purpose

Automates operational planning and task creation.

Trigger

Events:

- New client created

- Deal closed
 - Service request received
-

Input Data

Uses:

- Client information
 - Service requirements
 - Project details
-

Output

Creates:

- Task checklist
- Assigned team activities
- Workflow recommendations

Example:

New Client Onboarding:

- ✓ Send welcome package
 - ✓ Collect documents
 - ✓ Schedule kickoff meeting
 - ✓ Assign account owner
-

4. KPI Analyst Agent

Purpose

Transforms business data into executive insights.

Trigger

Scheduled workflow:

Weekly Reporting

Input Data

Analyzes:

- Leads
 - Opportunities
 - Revenue
 - Clients
 - Tasks
 - Automation logs
-

Output

Generates:

- Performance summaries
- Business recommendations
- Risk alerts

Example:

Weekly Summary:

Pipeline increased by 15%.

Recommendation:

Focus on proposal-stage opportunities.

5. SOP Assistant Agent

Purpose

Provides operational knowledge support.

Trigger

User requests process information.

Input Data

Uses:

- SOP library
 - Documentation
 - Business processes
-

Output

Provides:

- Step-by-step instructions
- Process explanations
- Recommended actions

Example:

Question:

How do we onboard a new client?

Answer:

1. Create client record
 2. Assign account manager
 3. Send onboarding package
 4. Schedule kickoff call
-

AI Prompt Framework

All agents follow this structure:

Role:

You are an AI business operations assistant.

Context:

Analyze the provided business data.

Task:

Evaluate the information and provide recommendations.

Output:

Return:

1. Summary

2. Priority Level
3. Recommended Action
4. Next Steps

AI Governance

Data Handling

Agents only process:

- Business operational data
- CRM information
- Workflow information

Human Approval

AI recommendations should support human decision-making.

Examples:

AI recommends: "Follow up with customer."

Human decides: When and how to contact the customer.

Business Benefits

The AI Agent Framework provides:

- ✓ Faster decision-making
- ✓ Reduced manual review
- ✓ Improved workflow consistency
- ✓ Better customer response time
- ✓ Automated business insights

Future AI Enhancements

Possible extensions:

- AI email drafting agent
- AI customer support agent
- AI proposal generator

- AI forecasting agent
 - AI document processing agent
-

Platform Summary

The AI Agent Framework transforms Airtable from a simple database into an intelligent business operating system.
