

Database Architecture

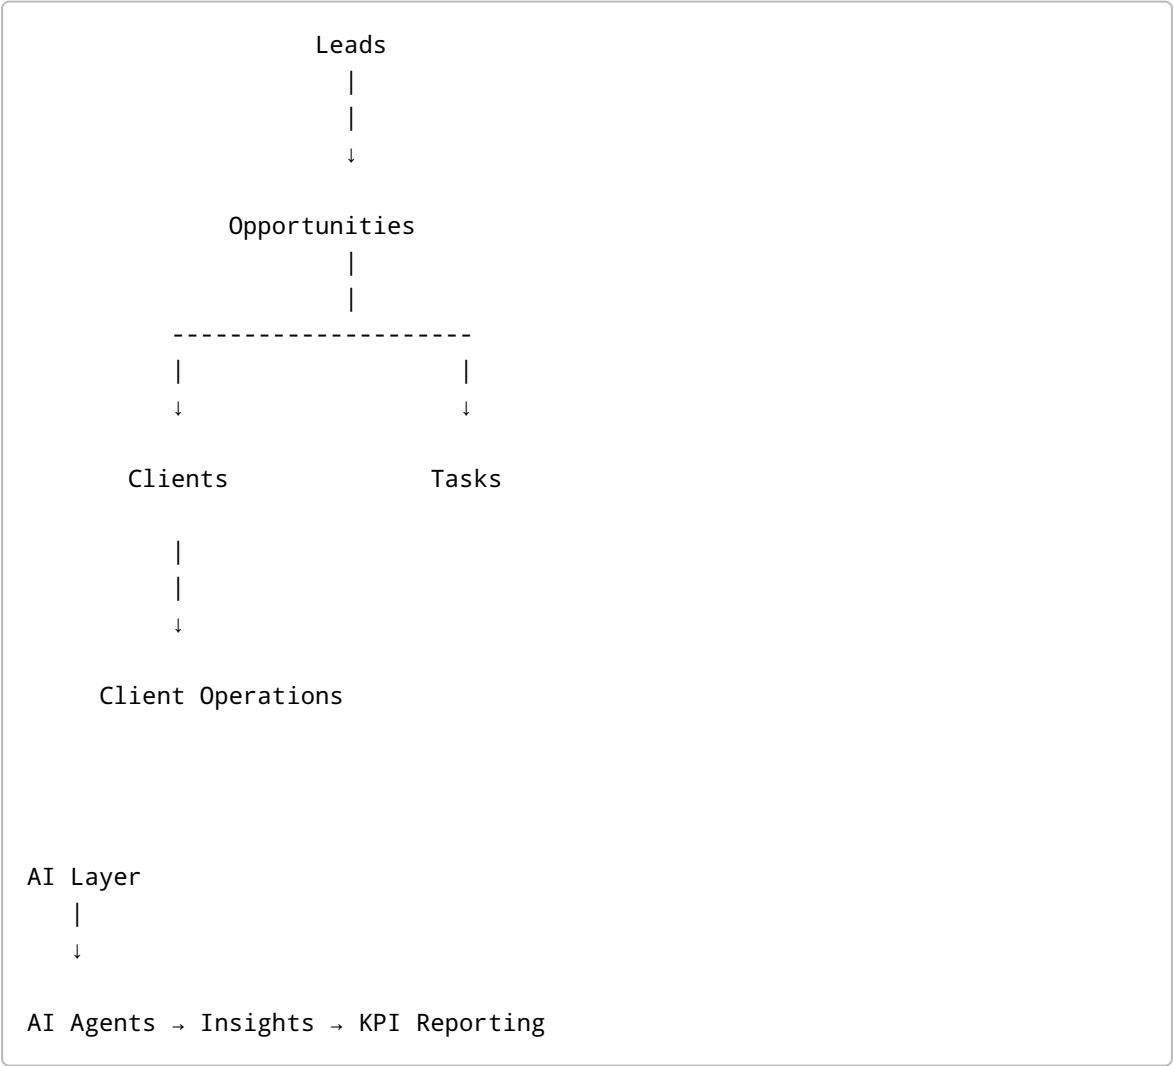

AI Business Operations Platform (ABOP)

Overview

The AI Business Operations Platform uses Airtable as the central operational database and single source of truth.

The database architecture was designed using a relational model to connect customer information, sales activities, operational workflows, AI processing, and business intelligence reporting.

System Data Model

Core Tables

1. Leads Table

Purpose

Stores all incoming prospects and business opportunities.

Fields

Field	Type	Description
Lead Name	Text	Contact person
Company	Text	Business/company name
Email	Email	Lead contact
Phone	Phone	Contact number
Lead Source	Single Select	Website, Referral, LinkedIn, Facebook
Service Requested	Multi Select	Requested service
Status	Single Select	New, Contacted, Qualified, Proposal Sent
Qualification	Single Select	Hot, Warm, Cold
Urgency	Single Select	Low, Medium, High, Emergency
AI Summary	Long Text	AI-generated lead analysis

2. Opportunities Table

Purpose

Tracks sales pipeline and revenue forecasting.

Fields

Field	Type	Description
Opportunity Name	Text	Deal name
Deal Value	Currency	Estimated revenue
Sales Stage	Single Select	Pipeline stage
Probability	Percentage	Closing likelihood
Expected Close Date	Date	Forecast close date

Field	Type	Description
AI Win Analysis	Long Text	AI-generated sales prediction

3. Clients Table

Purpose

Manages converted customers and customer success activities.

Fields

Field	Type	Description
Client Name	Text	Customer/company
Primary Contact	Text	Main contact
Email	Email	Client email
Status	Single Select	Active, Onboarding
Start Date	Date	Customer start date
Client Health Summary	Long Text	AI-generated customer insights

4. Tasks Table

Purpose

Manages business workflows and operational activities.

Fields

Field	Type	Description
Task Name	Text	Activity name
Description	Long Text	Task details
Assigned Team	Single Select	Responsible department
Priority	Single Select	Low, Medium, High
Due Date	Date	Deadline
Status	Single Select	Not Started, In Progress, Completed
AI Recommendation	Long Text	AI workflow suggestion

5. KPI Table

Purpose

Tracks business performance and executive metrics.

Fields

Field	Type	Description
KPI Name	Text	Metric name
Current Value	Number	Current performance
Target Value	Number	Business goal
Reporting Period	Single Select	Weekly, Monthly
Date Updated	Date	Last update
AI Insight	Long Text	Generated recommendation

Data Relationships

Leads → Opportunities

A qualified lead can become a sales opportunity.

Example:

```
graph TD; A[New Lead] --> B[Qualified Lead]; B --> C[Opportunity Created];
```

Opportunities → Clients

A successful opportunity becomes a client.

Example:

Closed Won Deal
↓
Client Account Created

Clients → Tasks

Clients generate operational tasks.

Example:

New Client
↓
Onboarding Tasks
↓
Service Delivery

Architecture Benefits

This structure provides:

- Centralized business data
- Scalable CRM management
- Automated workflows
- AI-powered decision support

- Real-time operational visibility
-

Technology

Database Platform: Airtable

Automation Layer: Zapier / APIs

AI Layer: AI Agents and Prompt Workflows

Reporting: Airtable Interfaces
